TRX® Suspension Trainer™ Preventative Maintenance and Safety Check

The TRX Suspension Trainer is made of high quality materials, but with extensive use can experience wear and tear. Here are a few key things to look for when performing weekly safety and maintenance checks with each TRX Suspension Trainer.

Check for open gate or bent carabiner

If a broken carabiner occurs, remove immediately and contact TRX Customer Service for replacement at 888.878.5348.

No Sawing

Sawing is considered to be a pulley-like motion of the straps that may cause excessive wear of the stabilizing loop while damaging the strap. If a Suspension Trainer unit is compromised due to sawing, pull off the floor immediately and replace with a non-compromised unit.

SAWING

Check for torn handles

If tearing begins, athletic tape is recommended to prevent additional damage.

Clean Daily

Antimicrobial wipes are recommended on the handles and foot cradles.

TRX WARRANTY

The TRX Suspension Trainer comes with a one-year limited replacement warranty for manufacturing defects. However, the limited warranty does not cover any damage from user-error such as sawing. Other conditions apply, so be sure to check the limited warranty.

REPLACEMENT PROCESS

1. Reference your original order information to determine date of purchase. Check the Warranty Registration page for possible warranty coverage. Products should be registered after purchase at http://www.trxtraining.com/activate/

2. We request photos of the damaged area to assess if it is a manufacturing issue.

3. Once damage is verified as a manufacturing issue, we ask customers to return defective product to our corporate office. We provide customers with an RA# number and prepaid shipping label.

4. Once we receive the returned product, we inspect it to confirm its authenticity.

5. Once we confirm it is an authentic TRX Suspension Trainer with a manufacturing issue, we'll ship out a replacement Suspension Trainer.
